ABSTRACT

A system for managing a development project for a customer includes at least one database having data, and allows the customer to select at least one

5   selected product from at least one of the databases, and provides for viewing at least one selected product. The system allows customer to manage a project through a website and determine how various changes to the project will affect cost, time and other variables. The system can also allow customer to collaborate on a development project with installers, architects and other workers. The system allows customer to

10   match a product to particular requirements. A kiosk system allows customer to view various products within the store, make selections through the kiosk and, potentially, match product to a particular requirement.
